

The SHARK saw blade uses materials accord with European standard. The sophisticated PVD coating treated SHARK saw blade has a dark grey or black layer, with high wear protection and achieves a very low friction coefficient. It is a cost-efficient solution for productive cutting.

Advantages compare with similar blades

- Higher blade life
- Better wear protection
- Higher production output
- Lower cost per cut
- Ideal for cutting both structural steel and stainless

APPLICATIONS

- All applications like tubes, pipes, profiles.
- Standard stainless (exclusive of 201 series)
- Non alloy tool steel
- Structural steel
- Copper, brass
